

#	primary goal	task-question
0.0.0		what tools do you think could be developed to aid intervention designers (esp. for JiTAI design)?
1		Which population are you trying to help?
2		What is the distal outcome of the JITA?
3	What is the temporal progression of key factors towards the distal outcome?	
3.1		Would you like to start with the day-level or the week-level?
3.3	day-level OR week-level	
		describe some hypothetical scenarios in which key factors affect the distal outcome at the (week/hour) level
3.3.1		start recording, staff goes through example, shows basic functionality
	week-level OR day-level	
3.3.2		subject opens up behaviorSim now recording screenshare
3.3.4		clear DSL box
3.6		how might some of the key factors at the day-level relate to those at the week-level?
3b	NPS for software	using a 0-10 scale, how likely is it that you would recommend a software like we used to a friend or colleague?
4	what are the contender proximal outcomes?	
4.2		at the day-level?
4.3		at the weekly level?
5		What factors mark a state of vulnerability/opportunity to intervention?
6		what possible intervention options can affect the proximal outcomes?
7		What factors mark a state of unreceptivity to the selected intervention options?
8		What are the tailoring variables?
9		For each possible level of the tailoring variable, which intervention option is likely to have the desired effect on the proximal outcome?
11.1	User Experience Questionnaire	Staff will provide link to survey regarding the JiTAI development methodology
11.2	NPS	using a 0-10 scale, how likely is it that you would recommend this JiTAI development methodology to a friend or colleague
11	User Experience Discussion	
11.3.1	x	why might you recommend this?
11.3.2	x	describe situation in which a colleague would benefit from this tool/method.
11.3.3	X	Describe how you would go through intervention development prior to this tool/method in contrast to how you might with the tool/method?
11.3.4	x	what were the most interesting parts of the process?
11.3.5	x	which parts of the process do you think need the most improvement?
11.3.6	x	how might aforementioned parts be improved?
11.3.7	x	which part did you learn the most from?
11.3.13	x	what are the most interesting/useful concepts learned in this process?
11.3.8	x	what were the most useful parts of the process for designing interventions?

[illegible]
